

## Installation Guide

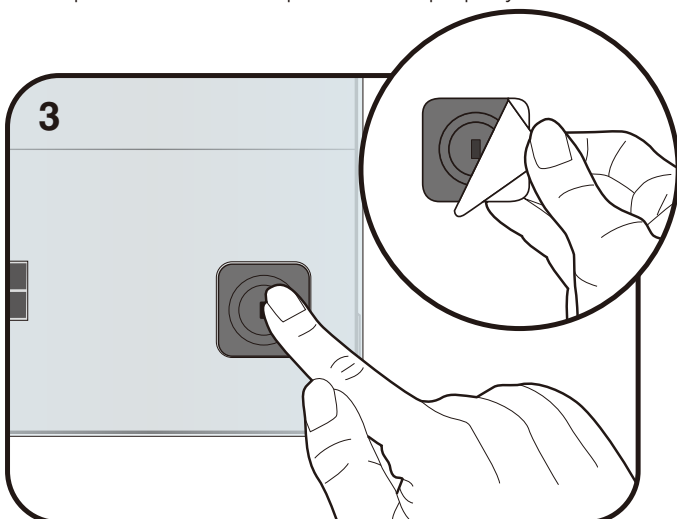

1 Place the PET tray on the back of your Surface Pro & ensure the square hole on the bottom of the tray is aligned with the Windows logo.

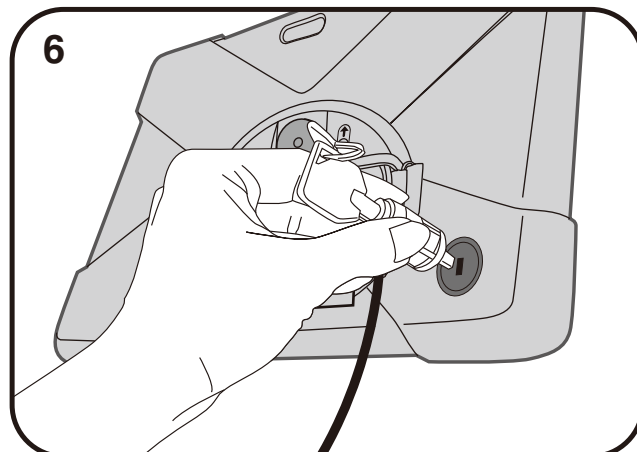

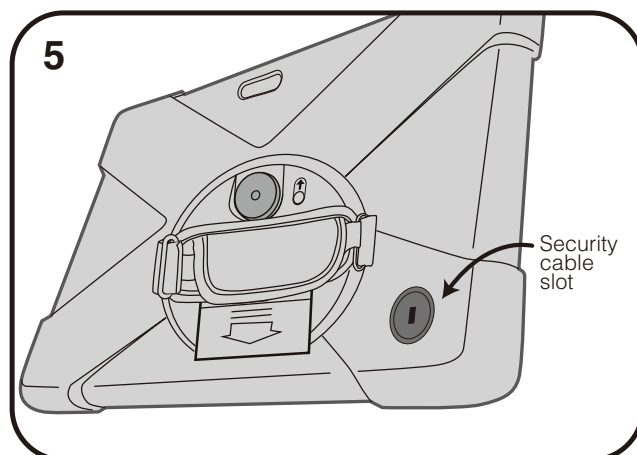

4 Surface Pro is installed into the hard frame and silicone cover. (Refer to the other installation guide)

2 Clean the Surface Pro (square-shaped hole) with the included alcohol pad. A clean and dry surface is required for the VHB tape to adhere properly.

3 Remove the VHB tape backing and apply the security plate directly onto the square-shaped opening on the PET tray. Remove the PET tray, then press the plate with a heavy object for 48 hours to allow the adhesive to cure.

6 Plug the security cable into the security cable slot.
