

Installation Guide

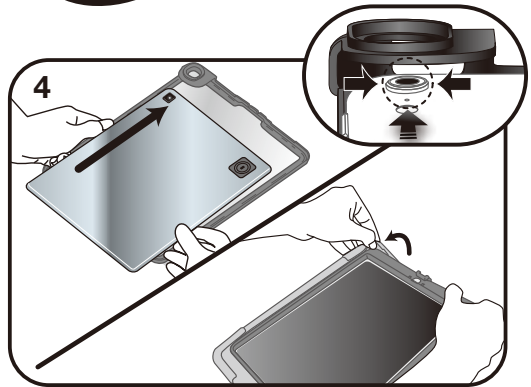

Align the plastic template onto the back of the device ensuring the back camera opening aligns correctly with the tablet.

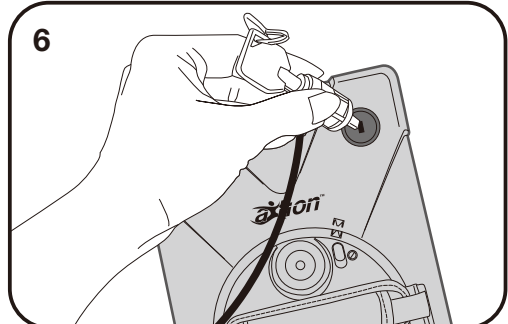

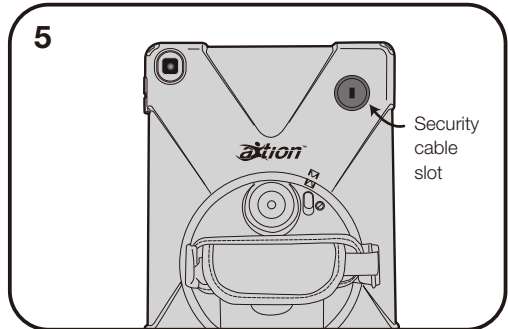

Using the included alcohol pad clean the surface of the device where the locking plate will install. The VHB adhesive adheres to the tablet properly when the surface is clean and dry.

Apply the locking plate onto the tablet. Use an object to apply pressure and allow the adhesive to cure for 48 hours. Then remove the plastic template.

Install the tablet into the case by first installing the tablet into the plastic frame ensuring the raised camera is inserted UNDER the camera lens. Then, install the plastic frame and tablet into the silicone cover (reference the case installation guide for more detailed instructions).

Insert the security cable into the security cable slot.
